SUMMARY

Software Engineer with ~4 years shipping production software across two domains — enterprise .NET observability tooling at Cavisson Systems, and cross-platform mobile game modules at Aristocrat Technologies. Strong in C#, TypeScript, and Unity-based architectures, with a track record of owning features end-to-end, debugging hard production issues, and building reusable frameworks that cut team delivery time.

EXPERIENCE

Software Engineer II · Aristocrat Technologies

Oct 2024 — Present · Noida, India

- Develop production mobile game modules for **NFL SB Slots** (Android + iOS) using C#, TypeScript, Unity-based architecture, backend API integration, and configuration-driven logic.
- Own core product features end-to-end: game logic, reel/spin mechanics, bonus rounds, UI flows, sound integration, backend data flow, analytics/events, and bug fixes.
- Delivered and contributed to **5–6 production game modules** including **Buffalo Link** — math-driven gameplay logic, symbol configuration, payline handling, and game-state behavior.
- Built a **reusable game template framework** (base structure, reel engine, configurable paylines, symbol config, common setup components) that cut new-game development time by **~30%**.
- Debugged complex production and QA issues — RTP/math mismatches, game freezes, spin-result mismatches, logic defects, device-specific bugs — improving release quality across modules.
- Collaborated with backend, QA, design, art, and product using GitLab, Jira, and GitLab CI/CD; received strong performance rating and manager appreciation for ownership and delivery.

Software Engineer · Cavisson Systems Inc

Jul 2022 — Oct 2024 · Noida, India

Enterprise performance testing, monitoring, and diagnostics software (NetDiagnostics — comparable to Dynatrace, New Relic, Datadog).

- Debugged and enhanced ASP.NET MVC and ASP.NET Core MVC applications to improve performance and functionality.
- Implemented Entity Framework within MVC applications and applied design patterns (IoC, DIP, SOLID) to improve architecture and decoupling.
- Built and maintained .NET and .NET Core applications backed by MSSQL and Oracle.
- Conducted JMeter load testing to evaluate software performance under various conditions.
- Used Git / GitLab for version control across team projects.

PROJECTS

Reusable Game Template Framework · internal

TypeScript framework with base game shell, configurable reel engine, payline + symbol configuration, and common setup components. Reduced new-game development time by ~30%.

HRMS Application

Internal HR system — leave application with email notifications, employee activity tracking, admin approval flow, and a LAN-based employee chat module.

Customer Churn Prediction

Predictive model for a bank's customer churn rate. Covered data exploration, feature engineering, and supervised model comparison.

SKILLS

Languages	C#, TypeScript, JavaScript, C, C++, Python, Java, SQL, HTML, CSS
Frameworks & Runtimes	.NET / .NET Core, ASP.NET MVC, Entity Framework, Unity, React
Mobile & Game	Unity architecture, Android, iOS, reel/spin mechanics, payline systems, game configuration
Backend & Data	REST / SOAP, WCF, MSSQL, Oracle, IIS
Practices	SOLID, Design Patterns, IoC / Dependency Injection, Auth / Authorization, SDLC, Multithreading
Tooling	Git, GitLab, GitLab CI/CD, Jira, JMeter

EDUCATION

B.Tech · GGSIP University

Aug 2018 — May 2022 · New Delhi · 80%

CERTIFICATIONS
